Managing chronic kidney disease in cats can be a daunting task and is often frustrating for owners as well as practitioners and technicians. The goal in managing chronic renal disease is not to reverse the disease but to help maintain and/or improve the pet's quality of life, offer support for the owners, and slow progression of the disease through various treatment options.

However, more recently it has been shown that feeding diabetic cats a diet high in protein (>45% of calories) and low in carbohydrates (<20% of calories) improves glucose regulation and increases incidence of spontaneous remission. Nonetheless, some diabetic cats may have concurrent diseases for which the dietary management takes precedent.
