## Assessment And Management

Though even the most conscientious psychiatrist cannot prevent every suicide, suicide risk can be assessed, managed, and reduced. Dr. Simon acknowledges that the professional environment in which clinicians now practice is often inhospitable to the time-consuming task of understanding the patient; yet "Know thy patient" is his theme and imperative.

Preventing suicide in primary care. Suicide is on the rise in the U.S., and the crisis has hit close to home for some primary care practices. Recently, a patient at a primary care clinic at the University of California, San Francisco (UCSF), died by suicide. The patient had a psychiatric admission and had been seen by his primary care physician not long beforehand, said Maki Aoki, MD, a general internist at the clinic.

Use of a screening tool such as the one of the New South Wales Department of Health (2004a) or the Nurses Global Assessment of Suicide Risk (NGASR) (Cutcliffe & Barker, 2004) alerts the health care provider to the severity of suicidal risk. These assessments provide a concrete documentation of suicide assessment risk measurement.
