(i) Renewable energy sources: These are the energy sources that are derived from natural sources that replenish themselves over short periods of time. These resources include the Sun, wind, moving water, organic plant and waste material (biomass), and the Earth's heat (geothermal). These resources are also called nonconventional sources of energy. This renewable energy sources can be used to generate electricity as well as for other applications.

All energy sources have some impact on our environment. Fossil fuels—coal, oil, and natural gas—do substantially more harm than renewable energy sources by most measures, including air and water pollution, damage to public health, wildlife and habitat loss, water use, land use, and global warming emissions.. However, renewable sources such as wind, solar, geothermal, biomass,
